

Video title: Zeeshan Ul Hassan Usmani motivational success story and Biography | ilm Portal

Video Link: <https://www.youtube.com/watch?v=Bhzn1HxPOSo&t=10s>

Assalam-o-Alaikum, viewers!

Dr. Zeeshan-ul-Hasan Usmani is a Pakistani data scientist, author, businessman, and computer science expert who has earned multiple degrees in the field. He has worked as a data scientist in 21 countries, traveled to 128 countries, taught at numerous universities, and holds residencies in 10 countries. Additionally, he has authored over 40 books on topics such as technology, politics, international affairs, and self-development. He has showcased his abilities globally, bringing pride to Pakistan. His passion for knowledge is so profound that his personal library contains over 26,000 books, all of which he has read. He is also known for memorizing over 6,000 idioms. He refers to himself as a "digital laborer". Today, we will take a closer look at his life and his journey from humble beginnings to success.

Zeeshan Usmani was born on May 29, 1978, in the northwestern region of Pakistan, the youngest of 14 siblings, including a twin brother. His father sold utensils. He grew up facing many hardships and had difficulty getting admission to school. However, Allah Almighty blessed him with immense talent. He completed his early education at Shah Faisal Mosque, then attended Motor High School for primary and secondary education. He completed his intermediate studies at SM College, achieving top positions as a pre-medical student. He earned his bachelor's degree from Shah Abdul Latif University, Khairpur. Continuing his education, he went through renowned institutions in Karachi and Lahore, eventually receiving scholarships to pursue six master's degrees and a Ph.D. in Computer Science from America. He reached university through his own efforts, received two Fulbright Scholarships, and then secured employment in leading organizations worldwide. Currently, he works as a Chief Data Scientist for a private company in America.

He is the author of over 40 books. He wrote his first book in 2003. "Justuju Ka Safar" is his first Urdu novel. "Kitab Mukammal Pareshani" is an excellent work on self-development. He has written numerous research papers and books in various fields of computer science, including Blockchain, Cryptocurrency, Digital Marketing, System Design, Metaverse, and other emerging technologies. He has also been part of Crown Prince Mohammed bin Salman's personal staff in Saudi Arabia. He has visited 123 countries and met 76 heads of state and global leaders.

The challenges of life have made him extremely serious. He responds to even lighthearted remarks with great passion. He has earned 176 certificates from major institutions worldwide and holds residency in 57 countries. He has an immense love for books and also publishes books under the name "Guftugu Publications". Through this initiative, he has published 76

books and has also translated technology-related content into Urdu. These books can even help people become data scientists. His detractors cause "Guftugu Publications" an annual loss of 1.8 million rupees through "pack orders," where books are ordered and then returned. His adversaries claim this is a way of taking revenge. Due to this, three employees of Guftugu Publications have already left their jobs. Despite this, he remains steadfast. He believes that we can only change people through books, and this work will continue.

Zeeshan Usmani states that there is immense negativity in the country, with widespread abuse. "When I upload a video or introduce a book, people hurl abuses at me. My books are negatively reviewed even before they are published. When I come to Pakistan, I get into trouble every time; sometimes, there's a fight on the street, or some robber or relative robs me". However, he does not get discouraged. Through his YouTube channel, he is transforming the lives of thousands. We pray to Allah Almighty to grant him continuous success in his mission and enable us to appreciate such benefactors and serve our nation by progressing in our own fields.

Viewers, if you wish to learn more about Zeeshan Usmani, you can read his biographical novel, "Justuju Ka Safar". If you liked this video, please like it. For more good videos, subscribe to my channel. We will meet again in a new video. Take care of yourselves. Allah Hafiz.
Assalam-o-Alaikum.

Video title:Zeeshan Usmani biography | Story of zeeshan Usmani | Let's grow

Video link:<https://www.youtube.com/watch?v=tsudZXieil0>

Assalam-o-Alaikum, viewers!

Today's video is about an extraordinary individual, Dr. Zeeshan-ul-Hasan Usmani, who was born in the Sukkar region of the Sindh valley. His life journey is not just remarkable, but also astonishing and captivating. Just as the sun illuminates everything, Dr. Zeeshan-ul-Hasan Usmani has brought enlightenment to the world.

Born on May 29, 1978, in Sukkar, into a humble household, Dr. Usmani's father was a simple potter. Growing up in extreme poverty, he tirelessly worked to overcome hardship and light the lamp of success through sheer effort.

His educational path is truly impressive, beginning at Modern High School, then SM College, Latif University, Western University, and culminating in a Ph.D. from Florida University. From childhood, he was destined for greatness, and today, the world recognizes him as a distinguished Data Scientist. Throughout his academic career, he earned approximately six master's degrees from various institutions and ultimately achieved a doctorate in Computer Science.

Dr. Usmani's triumph over poverty is a testament to his incredible work ethic. He was so impoverished that he couldn't afford formal university training. Yet, his dedication was such that he started a small photocopy shop, ordering books from outside, and would master them by self-study before they could even be officially "processed". Such was his intellect that he could memorize an entire book after reading it just once. During his school days, he verbally memorized 6,000 idioms. He also consistently secured top positions in every debate competition through his sheer intellectual prowess.

Dr. Zeeshan Usmani often emphasizes that everyone possesses a unique inherent skill that needs to be nurtured. For him, that skill was reading, which he mastered. His personal library boasts over 26,000 books, all of which he has read. Not only is he an avid reader, but he is also an accomplished writer, with numerous books in Urdu and English to his credit. He has authored more than 40 books on self-development.

His areas of interest include Computer Science, Wireless and IT Communication, Social Intelligence, Facebook Research, Security, and Cannabis. Dr. Zeeshan Usmani holds over 170 certifications. Currently, he works as a Data Scientist in America for "Butter of Data Scientist Our

Freeze Ranjan". He has worked as a Data Scientist in approximately 21 countries and has traveled to over 123 countries. He also holds residency in multiple countries.

Millions follow him on social media platforms like YouTube and Facebook. He refers to himself as a "Digital Laborer". Dr. Zeeshan Usmani is a source of immense pride for our nation. He is passionate about training, which is why he emphasizes the importance of training to Pakistan's future generations. Through various social media platforms, he encourages young people and has started a series where he teaches them about different cultures, etiquette, and how to approach elders, even hosting feasts for them.

Beyond being a Data Scientist, Dr. Zeeshan Usmani is also a motivational speaker. Through his videos, he explains current situations and demonstrates how one can succeed abroad even with training received at home.

May Allah always keep such individuals safe in Pakistan. If you haven't subscribed to the channel yet, please do so. Thank you, and we'll see you in the next beautiful video. Until then, Allah Hafiz.

Video title: My Educational Background | میرا ایجوکیشنل بیک گراؤنڈ

Video link: https://www.youtube.com/watch?v=TwJrVi_6v_Y&t=347s

Assalamu alaikum. My name is Zeeshan Osmani, and today's video addresses a frequently asked question about my educational background. Many wonder about my qualifications, and whether I am truly capable of sharing the insights I do. My answer is simple: the world is full of individuals far more capable than I, and you are free to follow anyone on YouTube you choose.

My own educational journey began from very humble origins. It wasn't a "hi-fi" experience, but I will share its details. I started my schooling at Shah Faisal Masjid in Sakhar, near Minara Road, where I studied a bit of the Quran and Hadith. Afterward, I completed my matriculation at Modern High School Sakhar, achieving an "Imtiaz-e-Numro" (distinction). However, I never particularly liked that school, nor was I a brilliant student in the conventional sense.

What Allah blessed me with was an exceptional memory. Any book I read, I would completely memorize. This meant that during every summer vacation, I would read and memorize the entire textbook for the upcoming academic year. Consequently, I would become incredibly bored in school. Whether it was biology, math, Urdu, Pakistan Studies, or Islamiyat, I had already memorized all the books. This boredom often led me to skip school, even scaling walls to escape. As a result, I would get severely disciplined. I believe I might have endured more physical punishment during my school career than almost anyone else, often receiving beatings from the headmaster and teachers.

This pattern continued until I reached the 7th grade, where I met a teacher named Ms. Parveen. She introduced me to memorization techniques, and at that time, she herself had memorized 6,000 to 8,000 verses. Perhaps she still remembers them.

Moving forward, I earned six master's degrees from various institutions. My first master's degree was in Computer Science from Shah Abdul Latif University. My second was an MBA from Iqra University, and my third was in Computer Networks and Communications from the University of London. My fourth master's degree was in Project Management from the University of Manchester, and my fifth was in Finance from the University of Manchester. Finally, my sixth master's degree was in Cyber Security from the University of Hertfordshire. I completed this Master's in 2018. Following that, I pursued a Master's in Cryptocurrency from the University of Nicosia, completing it between 2015 and 2017. So, I have a few master's degrees and one Ph.D. - not an excessive amount of education.

Currently, I'm developing an interest in cannabis, and my master's classes in this field began just last week. I hope to write a book on the cannabis business and its future trajectory. After completing my Master's in blockchain, I authored two books on the subject, one in English and one in Urdu, both of which are available. In computer science, my main fields are AI, Data Sciences, Blockchain, Cryptocurrency, and a bit of cybersecurity. I also work in other related areas. This summarizes my educational background.

I have a strong desire to continue learning throughout my life. I always strive to study. I even attempted a Ph.D., and I enjoy economics, for which I gained admission. However, my wife eventually asked me, "For God's sake, your son is also studying now!" My wife herself pursued a Master's in IR, then a CFA in the UK, and is now undertaking a new Master's in social justice before planning a Ph.D. My son is currently pursuing a Bachelor's in entrepreneurship. My wife humorously suggested that her time for studying was over, and it was my turn. So, I began studying cannabis, but I couldn't commit to a Ph.D. because it's a full-time commitment, and I cannot manage it alongside my work.

This is a brief overview of my educational journey. I hope it offers some insight and motivation. I plan to create similar videos about my professional background, including my internships, jobs, and travels. Perhaps I'll even make travel vlogs. Thank you for listening. I am Zeeshan Osmani.

=====

Video title: My Library | میری لائبریری

Video link: <https://www.youtube.com/watch?v=kpZL0le0AkM>

Assalamu Alaikum. My name is Zeeshan Usmani, and today, I'd like to invite you on a tour of my library. Please, come with me to the basement, where it's located.

As we head down, you'll see our small kitchenette, perfect for preparing tea when guests arrive. And this is the library itself, a space I envisioned on March 23, 2017, which also happens to be my wedding anniversary. The inspiration for its creation came from a story about Umar Farooq, who, when laying the foundation for a government building, inscribed a message. Similarly, when the idea for this library took root, I inscribed, "I come in peace, I do no harm, I am here to teach, would you listen?"

This project began with the aim of fostering knowledge. Given the situation in Pakistan, it took almost four years to complete, but now the library stands are finished. It houses 26,000 books, some from my personal collection, others acquired through various projects. Whenever I find a moment of peace, I come here. With no SIM card or internet access in the basement, it's a tranquil space where I can read undisturbed.

Let me introduce you to a few highlights. This is a Galton Board, one of my favorite items. It beautifully demonstrates statistical concepts like the Pascal Triangle, the golden ratio, and the Fibonacci series, making complex ideas accessible to children.

Among my collection is a small book titled "History of Money," which traces the evolution of currency from bartering to rice, stone, and even cryptocurrency. There's also a book that guides you on earning money from the internet. Additionally, I have a series of books called "Shaur" and several PhD theses, which are excellent resources for gaining in-depth subject knowledge.

I plan to dedicate a portion of my time each week or month to discussing different sections of my books. We'll explore various topics, from economics to astrobiology, wild photography, physics, and chemistry, with a focus on subjects relevant to school curricula to benefit homeschooling children.

I've been building this library since I was 13 or 14 years old, and now at 42, it represents 28 to 29 years of dedicated collecting. It contains course books ranging from kindergarten to PhD level, as well as a comprehensive collection of newspapers. I also procure unique new books from places like India, America, and China, which, once read, further enrich the library's treasure. My ultimate vision is to one day open this library to children when a school is built, allowing them to study, enjoy tea and samosas, and gain knowledge.

Thank you for listening. I am Zeeshan Osmani.

=====

Video title: What is Agentic AI? | اے آئی کیا ہے؟

Video link: https://www.youtube.com/watch?v=-pUfwxex-_Y&t=28s

Assalamu Alaikum, I am Zeeshan Usmani. Today, we're going to discuss Agentic AI. The biggest question today is whether Agentic AI will destroy or build your career. To understand this, it's crucial to grasp what it is. The entire world is moving towards AI. AI is projected to eliminate 800 million jobs globally, and approximately 83 million (around 5.25 crore) roles will cease to exist. So, the question is, will anything be left for you? Can you do anything, or not? This is what we will discuss in today's video.

The global definition of literacy is the ability to write one's name in their own language. If you can sign your name in your language, you are considered literate. Global literacy stands at over 86%. However, if we change the definition of literacy from simply being able to sign one's name to being able to code, global literacy would plummet from 86% to 3%. In this era of AI, you might not be replaced by AI itself, but you will certainly be replaced by someone who knows how to use AI.

The history of AI spans about 70 years. Let me give you an example. When AI began, its intelligence was comparable to that of a germ, like an amoeba. It continued to grow, much like bacteria. It then reached the level of rats, capable of finding their own path. It eventually evolved to the intelligence of cats and dogs, understanding basic commands. It then progressed to the level of monkeys, capable of a bit of imitation and learning.

Then came the intelligence of humans, which we refer to as Human-Level AI. This is a very recent development, perhaps only 5-6 months old. Previously, AI was limited to performing specific tasks, such as understanding text, generating images, or creating videos. However, for a long time, the desire was to create an AI that could perform multiple tasks, even if they were outside its primary function. We wanted AI to act like a baby, learning and adapting to new situations.

This concept is called Agentic AI, where the AI doesn't just respond to a single query but can take actions to achieve a goal. For instance, if you ask it to bring you a cup, it will autonomously search on Amazon and other platforms worldwide. It might then inform you, "Sir, this cup costs ₹2, I found it from China, and it will be delivered to you the day after tomorrow." This saves you from having to browse websites yourself. Consequently, website traffic worldwide is decreasing.

These are all trends indicating where the world is heading. How can you use it in defense? How can you use it for simulations? How can it contribute to national development? What will be the impact of Agentic AI on Pakistan's 140 million children? We will discuss all these aspects in a mega-session. Insha'Allah, we will meet there. You can also ask live questions. If nothing else, please share this video. Do comment and let me know if you like such videos so I can create

more. We can even have a session on how you can use Data Science to find suitable matches for your sons and daughters. We can also discuss how you can use Agentic AI to grow your business and leverage it for national interests. We can dedicate an entire session to this. So, please let me know in the comments if you would like to see such sessions. If you don't want to engage with Agentic AI, someone else will, and they will find employment.

=====

Video title:  Podcast with Rehan Allahwala | Youth, Passion & The Future with AI | Zeeshan Usmani

Video link: <https://www.youtube.com/watch?v=qWFYUUeZLGM>

Assalamu Alaikum. My name is Zeeshan Usmani. Today, I'm joined by my dear friend Rehan Allahwala. I've known Rehan for about 10-12 years, and our conversations are always enriching. He was instrumental in convincing me to start my YouTube channel. We often meet, whether I'm in Pakistan or he's in America or any other country. So, I thought it would be a good idea to record a short vlog with Rehan today, to introduce him and share his insights.

Since I am a forgiving person, I tend to overlook when someone wrongs me. When people gain access to resources, their minds begin to open. He (Rehan) is educating a mindset that has moved beyond poverty. They haven't emerged from the season of poverty, but if you free yourself from that mindset, you cannot remain poor.

We show a 7-year-old child an 18-minute talk on the very subject he is passionate about, the problem he wants to solve. These three tasks cannot be accomplished without discipline, focus, and consistency, as you mentioned earlier. A seventh-grader will take home 28,000 rupees, and an eighth-grader, earning 1.5 lakh rupees, will give half to you and take half home.

Consider this: a seventh-grader brings home 28,000 rupees a month, which covers the fees for "Bean House." You can open as many schools as you want. I'm providing you with the financial model, an open-source model. Take it, put your stamp on it, open a school, and fill it with children. Every year, 7 million children are born; keep enrolling them. Parents don't even have to pay fees; the child brings money home to the parents. We are reversing the norm, where a seventh-grader will take 28,000 rupees home, and an eighth-grader, earning 1.5 lakh, will give half to you and take half home. An eighth-grader earning 75,000 rupees a month is not even found among MBA graduates. I am refining this model, and Insha'Allah, I will take it to a point where Pakistan's unemployment rate, currently 6.3% overall and 44.9% for fresh youth

graduates, will drastically improve. This means half the children from underprivileged areas currently don't find jobs. They earn 15,000 rupees at Harvard, 25,000 elsewhere...

I've known him for many years. First, I introduced him. He trained his own flies for this. I don't know if that's public data or not, but I've spent the last three or three and a half hours with you, and I didn't realize how quickly time flew. The things you've shown offer a glimpse into the future. But your past is very interesting. You are one of 15 siblings, with 14 sisters. You were born into a very poor family. Perhaps you even worked as a milkman. If you could share a bit of your story, people might be motivated to see that an ordinary Pakistani, who is called by the President of Chile, works for Victoria's Secret, and teaches national defense in America, can achieve this. An ordinary person can achieve this higher level, which ordinary series don't use. It is my wish that you share a little bit of your story with others.

He says he used to make things clear. It's difficult to present yourself. I think that among all these things, the only feature is the desire to be a mentor, to understand why you know more about something than others, or why you know something that others don't. The second characteristic is humility. He says before Allah, you should always bow down. If you don't do it before going to him, you should do it now. The teacher should do it. All of them are on holidays. Ask Allah for this prayer. This is not India's highest mind. Finish the distances. They want to watch serials playing at 22. Come here and tell me a little bit. I met the person concerned in Karachi. I wanted to meet him very much. There is a question. Tell me, is there a way to reach Allah? Do you know me? Do you understand me? He asked a little bit about how children are made. What should I do now? What is the shortcut? We are greedy people. The company's success will be achieved. We will eat. The whole country will talk about it. And we will decide this. And we are innocent rogues. And we will keep paying the taxes. The big thing is to finish the big one. The first thing is to become a gentle prayer. Ask so much, ask so much, ask so much that no one is poorer than me. You obey every word, keep talking all the time. Look at the essence of shoes. Million dollar expense, some people from here and second, become sugar. This is a tight سلام. He should go to that side. Begum Saheb brings me to me. He bows down. He has a big issue with Someru. Allah has entrusted it. Allah will do good. Keep doing work. Don't want anything. You will get everything.

=====

Video title: Skills Vs Degree | Very Informative Clash with
Azad Chaiwala | Zeeshan Usmani

Video link: https://www.youtube.com/watch?v=p2NJkX_oDYI

Assalamu Alaikum. My name is Zeeshan Usmani. Today, I'm meeting with Azad Chaiwala, and as you know, there's an ongoing debate in Pakistan: should one pursue traditional education or acquire skills? I advocate for education, given my numerous degrees and global experience, which confirm the value of a degree. Azad Chaiwala, on the other hand, argues that degrees and formal education are useless, and people should focus on skills.

We decided to sit down and clarify this matter. Are these two different paths, or are we both advocating for the same goal with different approaches? Who should you follow, and what steps should you take to improve your life, rather than ruining your future by getting caught in unnecessary controversies involving us? Our futures are set, but your future is your concern. So, we thought we'd resolve this issue once and for all, allowing everyone to understand. Azad Bhai, thank you so much for coming; your presence is greatly appreciated.

Let's start. Please introduce yourself and your educational background. If you'd like, share a bit about your financial standing so people can understand whether you're actually achieving anything with your education or not. Also, for a moment...

Now, I could suggest you sell Coke or Pepsi. While times are different now, there was a time when people were willing to pay millions for the agency rights to these products. Why? Because they sell themselves. Similarly, we are selling agencies for Pakistani-made products—be it soap, shampoo, or cosmetics—offering wholesaling opportunities, distributorships, and export licenses. For instance, a license might grant you exclusive rights to sell our products in Dubai, whether it's a baby cot, a toy, or a food item. We're offering franchises for Pakistani brands. You might think, "I don't have a presence in the Gulf right now," and while Gulf franchisers typically don't offer such arrangements, many Pakistani brands like Burger Lab, 14th Street Pizza, and Coco Button do. If you want to enter the apparel industry or any other brand, just show up on Friday, Saturday, or Sunday, from 10 AM to 10 PM, on May 10th, 11th, or 12th. Come and see the immense opportunities available in Pakistan. When you enter a ready-made business, their tried and tested methods...

=====

Video title: Formula to Become Millionaire | ملینیر بننے کا فارمولا

Video link: <https://www.youtube.com/watch?v=VKiC1Fw-E9s>

Assalamu Alaikum. My name is Zeeshan Osmani, and today, I'm going to share the formula for becoming a millionaire. This formula works in 99% of cases, so please listen with full attention.

There are four essential components to becoming a millionaire. The first is **faith**. You must genuinely believe that you will achieve it. Many people dismiss this as impossible, yet the very

nature that sustains us and grants us 70-80 years of life implies that each of us is inherently a millionaire. I'm not referring to the freedom or health we possess, but rather to monetary terms – how you can become a millionaire in rupees, wealth, and assets. My father used to say, "I will become a great man one day," and my mother believed in me. This conviction is incredibly important. The hope that you will not be disappointed, that you will succeed, that you will reach your goal one way or another, is vital. Therefore, have faith in God, in your abilities, and in your hard work. Without this foundational belief, you won't reach your destination.

The second most crucial, yet often overlooked, aspect in our society is **discipline**. Discipline is paramount. While motivation can provide a temporary boost, like steroids for a few days, it doesn't sustain a lifelong journey. Life has its ups and downs; sometimes things are good, sometimes bad. Sometimes a person gets discouraged, sometimes they perform well. Discipline is key. If you know you have to wake up at 5 in the morning...

Becoming a millionaire takes time. It's not an overnight transformation. You won't enter the journey today and emerge a millionaire next year. You'll start with smaller earnings—perhaps 5,000, then 10,000, then hundreds of thousands, and eventually millions. This is a continuous cycle.

Therefore, you must have **patience**. Patience requires time. So, cultivate faith, discipline, patience, and most importantly, **consistency**. Work a little, but do it daily. Write two pages every day, or read 20 pages, or even just one page daily. Maintain this consistency. You will witness how you begin to harmonize with people.

Consistency triumphs in many endeavors. Those who attempt to read 11 pages in a single day, then skip days for prayers, often don't achieve consistent results. It's commendable to offer prayers, but consistency in reading daily, without any breaks, is what truly matters. Read one page daily. Give a little to charity daily. Learn a little knowledge daily. Read a little book daily. Do a little writing daily. Listen to someone a little daily. If you embrace consistency, coupled with patience, faith, and a disciplined life, you will discover that nothing in this universe can prevent you from becoming a millionaire.

Listen to this video repeatedly. Evaluate whether these four qualities are present in your personality. Then, observe those who have reached this level; you will undoubtedly find these four traits as integral parts of their personality.

Thank you for listening. I am your Zeeshan Osmani.
